3D LifeViz® mini

The most compact 3D system for facial assessment, simulation & before/after comparison

QUANTIFICARE

About our 3D System

The 3D LifeViz® Mini is the first portable 3D imaging system capable of capturing the face for :
• skin analysis • measurements
• simulation • before/after comparison

Optimized reproducibility

Our researchers have worked tirelessly to achieve a 3D reconstruction with accurate geometry and remarkable image quality. Moreover, the 3D reconstruction can be matched to offer exceptional reproducibility between visits.

User-friendly solutions

Reproducible pictures are possible without repositioning systems, thanks to dual beam pointers. Take three photos which are then automatically stitched to reconstruct the patient's face in 3D. No need to block an entire exam room.

« The 3D LifeViz® Mini really makes a difference in terms of the patient's understanding of the treatment plan. Patients tend to go ahead with the procedure quicker than if you try to explain it to them using regular 2D images. »

Dr. Bruce Katz

Differentiate your practice

Improve patient communication

Show rejuvenation results

Convince & reassure
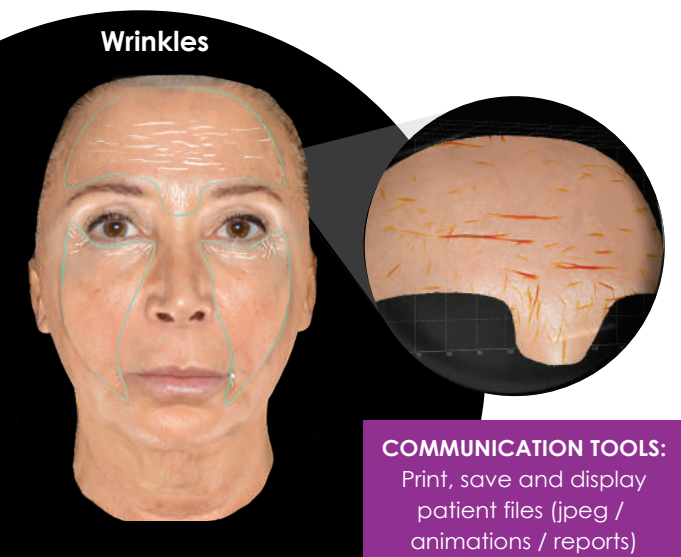

Increase patient conversions

Improve patient education with a personalized skin report

The 3D Skincare* module for skin evaluation

With a single click, evaluate your patient's skin health using multivariate analysis for the following measurements:

. **Wrinkles** . **Pores** . **Oiliness** . **Evenness**
. **Vascularization** . **Pigmentation**

Wrinkles

COMMUNICATION TOOLS:
Print, save and display patient files (jpeg / animations / reports)

Provide reference tools to guide the physician and to communicate with the patient about the best æsthetic interventions.

Create your own library of skin care products and make treatments recommendations by selecting them in your catalog browser.

The SkinCare module is not currently available to US customers.

Simulate & decide treatments options

## The Face Shaper module for aesthetic simulation

Reassure your patients and facilitate more comprehensive anti-aging treatments & harmonious outcomes.

Pre-Op   Simulation   Volume assessment

Better communicate with your patients on eyelid shaping using a blepharoplasty simulation.

Achieve facial harmony in 3D

The 3D viewer+ to compare images before and after treatment

**Pre-Op**   **Post-Op**   **Volume assessment**
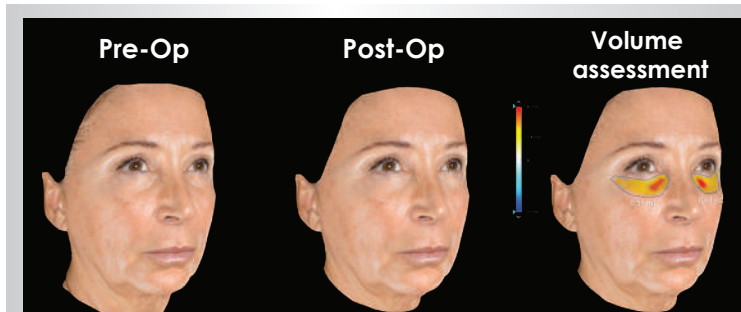

Visualize and quantify volume changes post treatment.

NEW : IMAGE COMPARISON SLIDER
Choose among a variety of comparison options (slider, *Silhouette*, side by side) which can be exported as high quality images or animated videos.
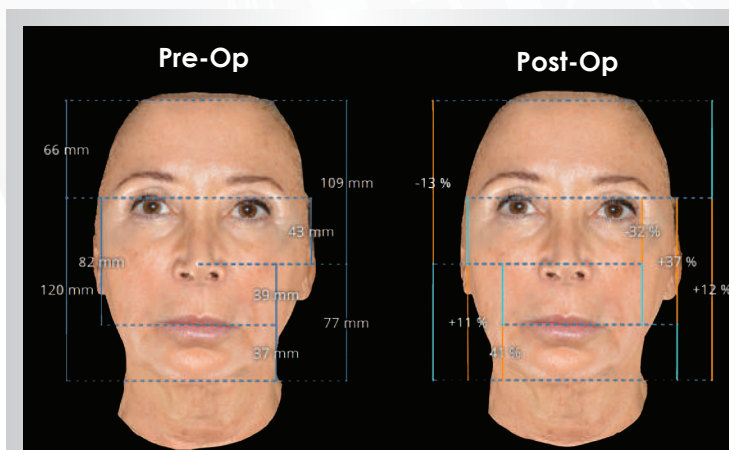

Angles

NEW : THE *SILHOUETTE* FEATURE

The *Silhouette* feature allows visualization of an overlay of before and after images.
